RESEARCH INTERESTS

Generative modeling via stochastic interpolants and flow matching, Bayesian inference, and optimal transport. Building principled methods that connect rigorous theory with large-scale real-world deployment.

WORK EXPERIENCE

Capital Fund Management (CFM)

Paris, France

VP, Quantitative Research

Jan 2024 – Present

- Lead a team of quantitative researchers building and deploying machine learning models for live investment strategies at one of the world's leading systematic hedge funds.
- Design, implement, and maintain production-grade predictive models on large-scale financial time series, from research to live deployment.

Research Scientist, CFM AI Lab

Jan 2024 – Present

- Developed kernelized and multitask extensions of stochastic interpolants — a continuous-time framework unifying score-based diffusion and flow matching — in collaboration with E. Vanden-Eijnden (Courant/NYU) and S. Mallat (ENS/Flatiron Institute).
- Published 6 papers in 2025–2026, including at NeurIPS 2025 and ICML 2026; co-investigated applications of random matrix theory to ML with J.-P. Bouchaud (CFM).
- Supervise PhD students and research interns.

University of Oxford, Department of Statistics

Oxford, UK

Visiting Research Scholar

Oct 2022 – Mar 2023

- Conducted research on Monte Carlo methods and deep generative models under the supervision of Prof. Arnaud Doucet.

AssessFirst

Paris, France

Head of Data Science

Dec 2021 – Nov 2022

- Led all data science initiatives and set the AI/ML roadmap for the company.
- Developed a variational inference algorithm served to 100k users, accelerating inference by 30%.
- Designed a statistical pattern detection algorithm for hiring, securing a 1.1M€ contract.

Credit Mutuel Arkéa

Rennes, France

Quantitative Developer

Apr 2019 – Nov 2020

- Developed a multivariate time series forecasting model for overdraft risk, deployed in production for 1.2 million users.
- Migrated option pricing codebase from VBA to C++, reducing execution time by 25% via importance sampling.

EDUCATION

Institut National Polytechnique (INP) – ANITI

Toulouse, France

Ph.D. in Applied Mathematics and Statistics

Nov 2020 – Dec 2023

- Supervised by Prof. Nicolas Dobigeon (IRIT/INP) and Prof. Pierre Chainais (Centrale Lille). Thesis on Monte Carlo sampling and deep generative models for Bayesian inference.

SERVICE

Reviewer: NeurIPS, ICML, ICLR, AISTATS.

SKILLS

Programming: Python, C++.

ML/DL: PyTorch, JAX, CUDA.

Infrastructure: Distributed Training, Docker, Git, Linux, AWS.

Languages: French (Native), English (Fluent).
